- Effects
 - Basics
 - Custom
 - Fading
 - Sliding

Effects

- show() reveals selected element
- hide() hides selected element
- toggle() toggles between 'show' and 'hide' states of the selected element
- show(a,b,c) / hide(a,b,c) / toggle (a,b,c)
 - a: "fast" // 200 ms
 - a: "slow" // 600 ms
 - a: 2000 // 2s
 - b: "linear"
 - b: "swing"
 - c: complete function

Effects

- fadeIn() fades-in the selected element to 100% opacity
- fadeIn(a,b,c) a: ms (slow/fast/numerical value)
b: easing
c: complete function
- fadeOut() fades-out the selected element to 0% opacity
- fadeOut(a,b,c) a: ms (slow/fast/numerical value)
b: easing
c: complete function
- fadeTo() fades to the specified opacity level
- fadeTo(a,b,c) a: ms (slow/fast/numerical value)
b: numerical value
c: complete function

//try to create a vibrating effect

Effects

- `slideUp()`
 - slides out to hide the selected element
 - can have the same parameters just like with other effects
- `slideDown()`
 - slides in to show the selected element
 - can have the same parameters just like with other effects
- `slideToggle()`
 - toggles the slide effect
 - can have the same parameters just like with other effects

Effects

- animate()

optional

animate(object-properties, time, easing, complete-fn.)

object-properties: name of the animation property and the value of the animation

time: “slow”/“fast”/400(default)

easing: “swing” (default)/“linear”

complete-fn.: completion call-back function

animate(object-properties, parameters)
